DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Che Swyden Chereskin on February 25, 2009.

The application has been amended as follows:

1. In claim 1, line 5, after "polyethylene glycol monostearate" insert "(40EO)".
2. In claim 1, line 6/7, after "polyethylene glycol monostearate" insert "(40EO)".

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

Applicant's arguments and affidavits with respect to claims 1 and 3 filed December 3, 2008 has been fully considered. In light of the Applicant's affidavits and

arguments and the Examiner's amendment, claims 1 and 3 are allowed and renumbered to claims 1-2.

In light of Applicant's arguments and affidavits which showed unexpected results of claims 1 and 3, the 103 (a) rejection over Inagi U.S. Application No. 4,309,414 is withdrawn.

In light of Applicant's arguments and affidavits which showed unexpected results of claims 1 and 3, the 103 (a) rejection of claims 1 and 3 as being unpatentable over Kimura Japanese Patent No. 10-182458 is withdrawn.

The following is an examiner's statement of reasons for allowance: Claims 1 and 3 are drawn to an indomethacin external preparation comprising 0.1-3% of indomethacin, 25-50% of alcohol, 0.01-5% gelling agent, 7-30% of oil component, 20-50% of water, and 0.01-10% of one or more components selected from the group consisting of glyceryl monostearate, sorbitan monostearate, stearyl alcohol, and polyethylene glycol monostearate, wherein the component selected from the group consisting of glyceryl monostearate, sorbitan monostearate, stearyl alcohol, and polyethylene glycol monostearate has a melting point of 40°C or higher. There is no prior art disclosing the applicant's external preparation, particularly containing the particular polymers/surfactants and the corresponding percentage for the oil component as disclosed in claim 1. The closest art is Kimura et al. (JP10-182458). Kimura et al.

teach an indomethacin gel composition comprising 0.5% indomethacin, 0.01% maleic acid-chlorpheniramine, 5.0% polyethylene glycol monostearate (i.e. component with no specific melting point), 3.01% diisopropyl adipate (i.e. oil), 8.0% 3-butylene glycol, 0.5% pyrrolidone, 1.5% carboxyvinyl polymer (i.e. gelling agent), propanolamine, 30.0% denatured ethanol, and water to a total of 100g. Kimura et al. further teach that said composition can be formulated in the form of a gel, cream, or ointment. Kimura et al. do not teach the exact concentration of oil disclosed in the instant invention or a polyethylene glycol monostearate with a melting point of 40°C or higher as disclosed in claim 1. Applicant's affidavit filed on 1/16/08 demonstrated that only particular polyethylene glycol monostearate species (i.e. 40EO) showed unexpected results and resulted in no phase separation (see table 1). Applicant's affidavit filed on 12/03/08 further supported the show of unexpected results wherein polymers with melting point of 40°C or higher demonstrated no phase separation while those below 40°C showed phase separation (see tables 1 and 2). Since the present claims require an oil component in the amount of 7 to 30% and a polymer/surfactant with a melting point of 40°C or higher, and Kimura et al. do not render obvious the instant preparation of claim 1, claims 1 and 3 are therefore allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Claims 1 and 3 are allowed.
